About me

Fullstack developer who builds and runs software in production, including AI features. I work as a consultant at Henrikssons Advice & Consulting, where I build and operate a production planning system for a client in the marine industry. Before that I built AI voice agents and RAG-based chat assistants at LeadCaller.

Before tech I spent many years in hospitality and worked my way up to managing a large part of a restaurant chain. I trained its staff in customer service, stress management and communication, and later started my own bar. I'm at ease talking to clients and management, and I keep calm when something breaks in production. I also bring energy and a good laugh to the teams I work in.

Work experience

Fullstack Developer / Consultant · Henrikssons Advice & Consulting 2026 TO PRESENT

Sole developer on a production planning system for a marine service company. It replaced whiteboard planning and has been in production since September 2026. I own everything from requirements to operations.

- Integrated with the client's existing work-order system over its REST API with a sync every 20 seconds, so staff kept their current routines.
- Built real-time views for a break-room display, desktop and mobile. A change reaches every screen within one second.
- Designed one controlled write layer to the client's system, with dry run by default and logging and rollback on every write path.
- Analyzed about 8,000 work orders to decide which data the system could rely on, and caught an API issue that doubled every key figure.
- Built a model that estimates job duration from historical time logs. Since jobs like lifting and painting depend on the weather, the plan also uses SMHI forecasts and warnings.
- Deployed on site on a Raspberry Pi as a Linux service, with remote access over Tailscale and no open ports.
- Advised management on feasibility and risk, delivered status reports, and flagged staff adoption early as the main risk.
- Used Claude Code as an AI pair programmer under guardrails I defined, with end-to-end tests in Playwright. I review and commit every change myself.

Node.js · TypeScript · Hono · REST · Playwright · Linux · Tailscale

Fullstack Developer · LeadCaller 2026

- Developed features for a live SaaS product in React/Remix on serverless AWS, used daily by the sales team and customers.
- Built an AI voice agent that handles phone calls, using Twilio, Deepgram, OpenAI and ElevenLabs.
- Built a RAG chat assistant that answers from each customer's own data, with vector search in Qdrant and Pinecone.
- Built real-time sales dashboards over WebSockets.
- Integrated Stripe payments and automated customer email and SMS.
- Handled customer onboarding, QA and production support.

TypeScript · React / Remix · AWS Lambda · DynamoDB · PostgreSQL · Qdrant · Pinecone

Intern · AI Sweden 2025

- Designed and built a tool that combines several project reports from Neo4j and SQL and uses Gemini to summarize them at different levels of a project, including the interface for reading and editing the summaries. AI Sweden adopted the concept and now runs its own version in production.

Intern · Algineer 2024

- Created educational animations in Manim in my first development team, working with Git in an agile process.

Skills

LANGUAGES

Python TypeScript JavaScript
SQL C#

FRONTEND

React Remix Tailwind CSS
Recharts WebSockets
React Native

BACKEND

Node.js Hono REST APIs
PostgreSQL DynamoDB Stripe
Sanity CMS

CLOUD & OPERATIONS
